Cryopreservation of Essential Mouse Lines

Mouse Transgenic and
Gene Targeting Core
Emory Integrated Core Facilities

Division of
Animal Resources
Emory Integrated Core Facilities

Do you have essential mouse lines that are critical to your research program?

If so, you should be aware that the Mouse Transgenic and Gene Targeting Core (TMF) and the Division of Animal Resources (DAR) teams are working together to help you protect your research in the context of COVID-19. **Cryopreserving your essential mouse lines is one of the best ways to protect your research!**

Dr. Karolina Piotrowska-Nitsche, core director of the TMF, is the primary point of contact for this service. We will accept projects on a first-come, first-served basis. Reagents are limited and we may not be able to support all investigators. Projects need to be submitted through PPMS that can be found at the Mouse Transgenic and Gene Targeting Core website (www.cores.emory.edu/tmf).

To get further information, please email: MouseCore@Emory.edu
