

Equipment Requests for COVID-19 Research Projects

Many Emory investigators are pursuing essential/critical research projects focused on the COVID-19 pandemic. Current areas of high interest include developing a validated serological assay, advancing therapeutic discovery, novel vaccine and immunological research, and pursue opportunities related to biobanking patient samples. This list is not all inclusive. Ongoing efforts are working to coordinate this research across the institution.

If you have plans to collect/are currently collecting samples from COVID-19 patients, please respond with a brief description of your work and the type of sample (DNA, serum, PBMCs) you need.

Providing essential platforms to support COVID-19 research is a high priority. Requests for new equipment to directly support COVID-19 research are being collected via email. Please include:

1. Principal investigator Name
2. Equipment name and specifications
3. Project title of research plan
4. Samples (DNA, serum, etc) needed or being collected

Please send information to mzwick@emory.edu

Michael E. Zwick, PhD
Associate Vice President for Research
