Implementation Science and Research at Emory

Matthew Freeman, PhD, MPH

**Associate Professor in Environmental Health
Rollins School of Public Health, Emory University**

Matthew Freeman, PhD, MPH is an Associate Professor in Environmental Health at the Rollins School of Public Health, with joint appointments in Epidemiology and Global Health, and is a Fellow at Emory's Global Health Institute. The work of the Freeman Research Group is focused on assessing the role of the lived environment on health of marginalized populations in low-income settings. He designs theory-informed interventions of water, sanitation, and hygiene (WASH) technologies and behaviors, and quantifying impacts through rigorous experimental and quasi-experimental methodologies; understanding drivers of behavior change and program sustainability; and utilizing implementation science frameworks to assess fidelity and context. Dr. Freeman has published over 100 peer-reviewed publications, serves on the global STH Advisory Committee, and contracts and advises the WHO on issues related to trachoma control, STH control, and WASH.
