Community Engagement

How does the Community Engagement program support collaborative community-academic partnerships to address health needs?

**Academic-Community Partnerships**
Community-based organizations lead pilot projects or health activities with academic researchers

**Scientific Discovery to Community**
Community-based organizations collaborate with academic researchers
Disseminate and translate community-relevant findings

**Building Collaborative Research Capacity**
Increase community-based organizations' skills and ability to work collaboratively with research partners

**Outcomes, Services, and Initiatives**
- Funds granted to community-based organizations
- 34 partnerships and organizations funded, totaling over $300,000
- Enhanced community assessment, program planning, evaluation, research and grant proposal writing
- Projects including tobacco, cancer, cardiovascular disease, hepatitis, mental health, trauma, breast cancer, and childhood obesity
- 3-Tier system of community engagement support
- Statewide biennial Community Engagement Forum: Advancing Research, Practice, and Population Health
