

Center for Childhood Infections & Vaccines

# CALL FOR ABSTRACTS

## 8th Annual Center for Childhood Infections & Vaccines Symposium

Our annual symposium brings together internal and external speakers to present the latest research on infectious diseases and vaccine development. We encourage Emory and CHOA investigators and trainees from all disciplines (pediatric and adult) to submit an abstract and present a poster on topics related to infectious diseases, including innovative research into microbial pathogenesis, immune responses, and the development of new vaccines and therapeutics.

By combining pediatric and adult research topics, we aim to synthesize our findings into care for patients of all ages.

This year's symposium will be in-person on Wednesday, November 6th in the Health Sciences Research Building (HSRB-II).

**Who can submit an abstract:** Open to all researchers focusing on pediatric and adult infectious diseases, this symposium invites innovative research on microbial pathogenesis, immune responses, and the development of new vaccines and therapeutics.

- Select abstracts will be invited to do oral presentations.
- You can submit abstracts you have prepared/presented at other events. (*encore presentations*)

**How:** Click [here](#) to submit your abstract. Some helpful tips for creating abstracts can be found [here](#).

**Deadline:** Abstracts are due by 5 pm on **Friday, September 20th, 2024**.

Sponsored by the Pediatric Research Alliance
