School of Public Health, Emory University,  
1518 Clifton Road NE Atlanta, GA 30322

## Shelagh Mulvaney, PhD,

*Associate Professor of Nursing, Pediatrics, and Biomedical Informatics at Vanderbilt University*

Shelagh Mulvaney, PhD, is an Associate Professor of Nursing, Pediatrics, and Biomedical Informatics at Vanderbilt University. Dr. Mulvaney received her PhD in clinical psychology from the University of Arizona and completed a clinical internship at the University of Vermont. She completed post-doctoral training in children's mental health services at Peabody College, Vanderbilt University. Dr. Mulvaney leads NIH and foundation-funded research to improve the assessment and integration of psychosocial factors in the design and evaluation of technology- and informatics-mediated behavior change support systems. Relevant aspects of her research include the use of social learning mechanisms to promote diabetes self-management, social and psychological aspects of data sharing, examination of processes that engage patients with their health data, and tailored mobile patient health communications. Recently Dr. Mulvaney and her team have developed a mobile app designed to improve self-management insights, enhance data sharing, and blood glucose excursions. The app integrates location, social context and psychosocial data (stress, mood, fatigue) with blood glucose and insulin administration device data for personalized feedback.
